

“Stormwater Wednesdays” The Center for Watershed Protection (CWP) 2015 Webcast Series.

An education, outreach, and training initiative sponsored by the Stormwater Coalition of Albany County

This webcast series is packed with cutting edge research and practical guidance for stormwater program managers, engineers, landscape architects, contractors, municipal officials, policy makers, and others interested in compliant, effective stormwater management! All welcome!

Call or e-mail to reserve a seat:

447-5645 or
swcoalition@albanycounty.com

PDH and CEUs may be possible. See CWP website for details: www.cwp.org/ce-pdh-credit

Are these LIVE, FREE webcasts for you??? Take a look and register today!

Green Infrastructure and Green Jobs

May 20, 2015; 1 - 2:30 PM

Location: Town of Colonie; Public Operations Center; 347 Old Niskayuna Rd; Latham, NY

Many existing workforce development and employment programs are expanding to incorporate installation and maintenance of green infrastructure practices, particularly in Cities that are ramping up deployment of green infrastructure practices. While this is a natural fit, programs must be tailored carefully to include not only technical training, but other workforce skills and support. In some cases, green infrastructure trainees are acquiring certifications to enhance their chances for employment in the field. This webcast features several programs around the country, and will highlight best practices for these types of programs, as well as critical lessons learned.

Multi-Sector & Industrial Stormwater Permits

June 10, 2015; 1- 2:30 PM

Location: Town of Colonie; Public Operations Center; 347 Old Niskayuna Rd; Latham, NY

Many localities are focused on MS4 permits, which include a pollution prevention and good housekeeping minimum measure. However, another important facet of NPDES and state permitting is stormwater permits for industrial and multi-sector facilities, including both public and private sites. Possible examples include public works yards, concrete batch plants, power plants, asphalt paving, mining, gas extraction, landfills, recycling facilities, transportation facilities, and wastewater plants, among other categories. The permitting of these facilities can be complicated, and perhaps confusing for MS4s that must also comply with minimum measure #6. This webcast will feature insights on the permitting process, tools available for facility inventories and inspections, and BMPs applicable to these types of sites.

Checking in on Post-Construction Stormwater Management

November 18, 2015; 1 - 2:30 PM

Location: Town of Colonie; Public Operations Center; 347 Old Niskayuna Rd; Latham, NY

For many MS4s, the post-construction minimum measure is the most complicated, and the one that requires the highest level of local program development. Post-construction stormwater management involves development of stormwater standards, plan review, inspections, and verification of long-term maintenance. This program is also becoming more prominent as state MS4 permits are revised and reauthorized. This webcast will explore innovations and trends in post-construction stormwater management, with MS4 case studies featuring program components and budgets.
